IP65 coil seal kit

Extreme wet conditions may require an IP65 coil sealing kit to prevent moisture ingress

A solenoid valve is a very versatile product. Its simplicity and quick open/close time make it ideally suited for numerous applications. Some of these applications require extra protection of the solenoid to avoid water accumulating between the solenoid and the valve shaft.

For these applications we have an extra sealing set which helps to eliminate the accumulation of water in these areas

The kit consists of a top nut and specially designed gaskets

IP 65 sealing set mounted on a timed condensate drain offering a high level of protection against moisture
