

Drymec

DrySep CT condensate distributor

The DrySep CT distributor is designed to distribute condensate into two or three oil/water separators.

Now you can combine multiple DrySep CT units to match larger compressor installations.

As the condensate flows through the DrySep CT distributor it is evenly diverted into the connected oil/water separators.

This allows the elements of each separator to be equally loaded with condensate.

The DrySep CT distributor has a 1/2" condensate inlet and three 1/2" outlets.

The DrySep CT distributor is supplied complete with the required fixings.
